Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and, 11 rejected under 35 U.S.C. 102(e) as being clearly anticipated by McNutt.

McNutt discloses a switch connector (11) which is adaptable to a computer system (col. 1 lines 10-16) including, a memory bus (fig. 1 connection between 12 and 18), at least one memory slot (44) and an electric load, wherein: said switch connector couples (figures 3 to 4) one of a plurality of signal lines (14 to 16) of said memory bus to one of a plurality of module pins (34, 48, 36) of a memory module (46 connection), in a case where said memory module is inserted in said at least one memory slot; and said switch connector couples the one of said plurality of signal lines of said memory bus to said electric load, in a case where said memory module is not inserted in said at least one memory slot (figures 2 or 3).

Regarding claim 11 McNutt discloses a switch connector (11) which is adaptive to a computer system (col. 1 lines 10-16) including, a memory bus (fig. 1 connection between 12 and 18), at least one memory slot (44) and an electrical load, comprising: a first connector pin (14, 15) which is coupled to one of a plurality of signal lines (14 to 16) of said memory bus; and a second connector pin (16, 17) which is coupled to said electric load, and wherein said switch connector provides electric contact between said first connector pin and said second connector pin, in a case where a memory module is not inserted in said at least one memory slot (claim 1 lines 23-29), and said switch connector insulates (fig. 1 inside component 26) said first connector pin from said second connector pin, in a case where said memory module is not inserted in said at least one memory slot (figures 2 or 3).

Allowable Subject Matter

3. Claims 13-14 are allowed over the prior art of record.
4. Claims 10 and 12 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: One end of the first pin is attached to the memory slot casing. The

other end of this first pin provides flex contact with the second pin of the memory module.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bright and Kovach et al teach switch connectors with pins. Lash et al and Abe et al teach memory modules and a switch connector.
